Since January 1, 2019, four projects previously underway in the Sims Bayou, Brays Bayou, Greens Bayou and Clear Creek watersheds were declared substantially complete, representing more than $35 million in new Flood Control District infrastructure.

The Flood Control District has awarded $133 million in flood damage reduction projects in all Harris County precincts since the first of 2019.

To help guide and inform future efforts, we held more than 100 community engagement meetings in all of our precincts during 2019, with more than 7,600 residents in attendance.

The Flood Control District re-launched its website in mid-November 2019. Since then, stakeholders have visited the content-rich site approximately 12,000 times. The revised site includes detailed information on 2018 Bond Program projects and an interactive map feature that allows residents to learn more about the projects in their watershed.

Go to www.hcfcd.org for more information.

- More than 324,000 cubic yards of silt plus more than 25,000 cubic yards of debris removed from our watersheds
- Outfall repairs totaling more than 25,360 linear feet of pipe
- More than 392,000 tons of riprap (erosion protection)
- And 38 miles of selective clearing on rights-of-way – the equivalent of more than 450 acres
