- New Project or Buyout
- In Support of Proposed Bond Project
- Comment
- Question
- Other

## WATERSHED APPROACH

The Flood Control District will focus on completing a general investigation of drainage concerns in the Willow Creek watershed. The general investigation will involve an analysis of Citizen Service Requests, a review of previous drainage studies, and a public meeting to gather input from citizens. The general investigation will lead to a preliminary engineering report, final design plans, and construction of identified drainage improvement projects. The Flood Control District is planning to acquire right-of-way in the floodway and floodplain of Willow Creek for future projects and/or floodplain preservation. Additionally, the Flood Control District will design and construct the final phases of the M124-00-00 channel conveyance improvement project and the final phase of the M528-01-00 stormwater detention basin. Voluntary home buyouts for structures that meet Flood Control District requirements are also planned for this watershed.

## BENEFITS

Proposed drainage improvements would allow for planning of future development that could occur in the Willow Creek watershed and to address current drainage problems in the watershed. Right-of-way acquisition would preserve floodplain areas and attempt to limit development in areas prone to flooding. The completion of the M124-00-00 channel conveyance improvement project will help address the known drainage issues near Tomball.

## PUBLIC INPUT THEMES

Channel Modification **6.67%**

Stormwater Detention **26.67%**

Channel Maintenance **6.67%**

Storm Repair **6.67%**

Home Buyouts **13.33%**

Engineering Study **13.33%**

Other Jurisdiction **26.67%**

## COMMUNITY INPUT REVIEW PROCESS

Each public comment was considered individually by the Flood Control District. Comments were reviewed to identify and categorize the ideas, concerns, requests, and information presented. This input was then categorized by theme for incorporation into the proposed bond program, and the Flood Control District team responded to each community input comment received. One Citizen Service Request was received. Themes identified for Willow Creek watershed are detailed below.

## COMMUNITY INPUT SUMMARY

From May 30 through August 3, 2018, the Flood Control District received a total of 15 community input comments related to flood damage reduction concerns in the Willow Creek watershed. Common themes expressed include requests for home buyouts, stormwater detention, additional flood damage reduction studies, and concerns that fall outside the Flood Control District's jurisdiction. Other themes expressed include requests for channel maintenance, channel modifications, and storm repairs.

Study requests focused on Tomball area subdivisions adjacent to Willow Creek. These comments suggest a combination of flood damage reduction measures, including channel modifications and additional stormwater detention for neighborhoods. Comments related to home buyouts included requests for consideration of the Northampton and Willow Forest subdivisions.

Community input that fell outside of the Flood Control District's jurisdiction included localized street and drainage improvements in the Montecrest Circle, Northampton, and Rosehill Reserve neighborhoods. Concerns expressed within the Willow Creek watershed that fall outside of the Flood Control District's jurisdiction require coordination with other municipalities and/or organizations to address these comments.
